(a) where the branches go: the fork in each representation space, one path per rule

(b) what they are: the position at t_0 (Black to move), and the move each branch plays there

(c) how far they run: each rule's distance from the reference, in the plane its cell draws (bar) and in that cell's full space (open marker), as a multiple of the same cell's legal control

game 1235 is selected, not typical: the argmax over 1550 branch-complete games of its illegal branches' mutual separation (README)
R1 placement (2): square holds the mover's disc · square holds the opponent's disc
R2 bracketing (3): empty, touches no discs · empty, touches only the mover's discs · empty, touches opponent discs, no line closes
R3 turn (1): flips only for the opponent (turn confusion)
