

point = one board square; arrow = the committed probe, same origin

- legal (reference) (n=60)
- illegal (n=60)
- R1 (n=60)
- R2 (n=60)
- R3 (n=60)
- board colour (n=64)
- board position (n=60)

board colour — $\ell_{\text{mine}} - \ell_{\text{theirs}}$ at one square: which player's disc sits there.

board position — $\frac{1}{2}(\ell_{\text{mine}} + \ell_{\text{theirs}}) - \ell_{\text{empty}}$ at one square: whether a disc sits there.

legal, R1, R2 and R3 — one 4-class rule probe per candidate square, each class against the mean of the four; illegal is the 2-class probe's illegal – legal.
