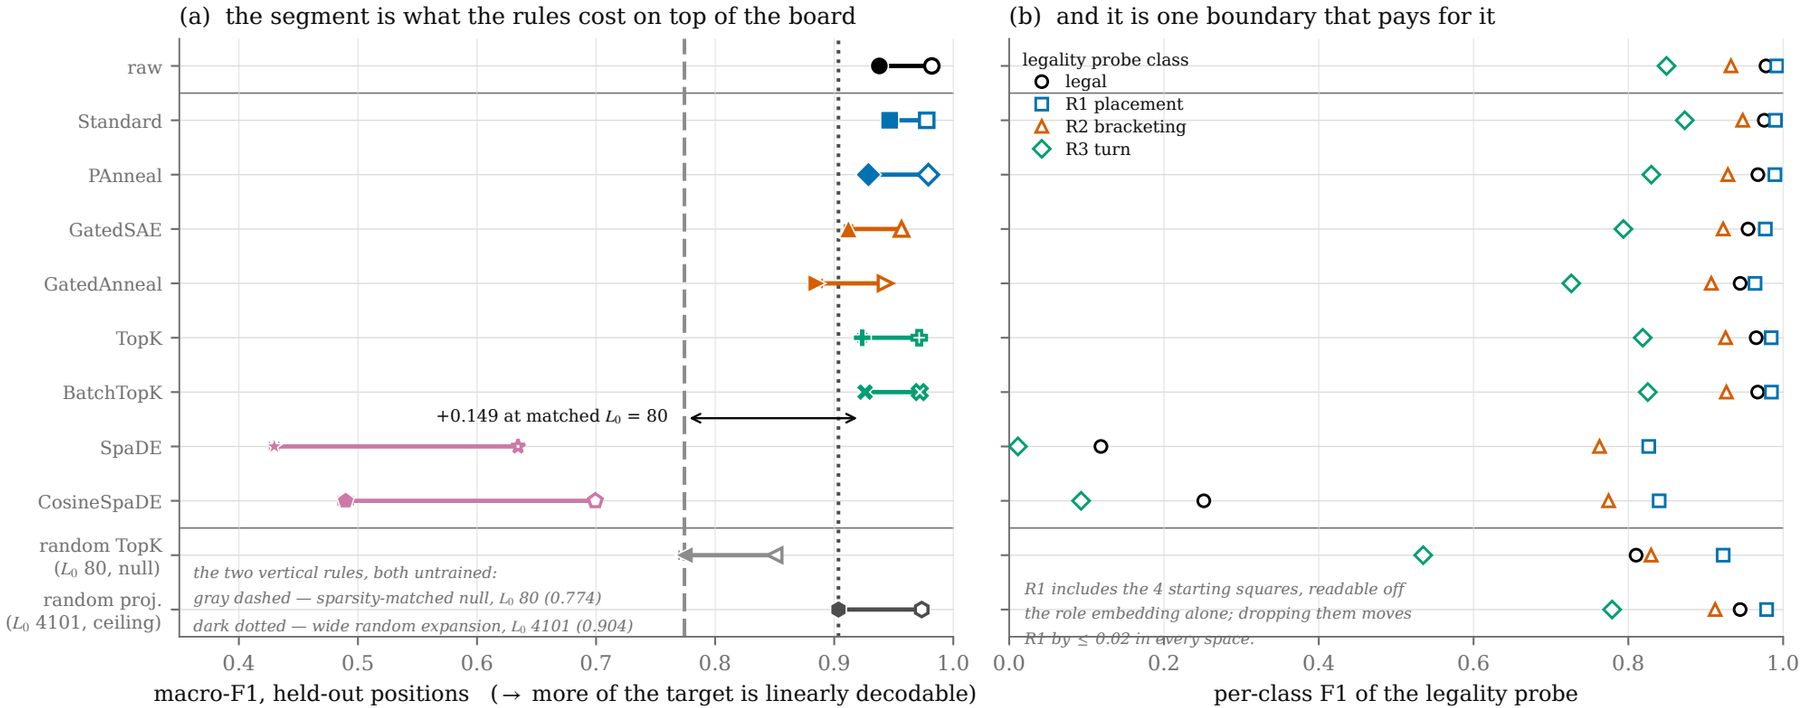
Open marker: the 3-way board probe (empty / theirs / mine). Filled marker with bars: the 4-way legality probe, $d_f = 3$. Both fitted in the same space with the same machinery, OthelloGPT layer 5. x truncated at 0.35 in (a); no marker is clipped.
Raw's legality scored for the WRONG player reads 0.907, within 0.004 of the untrained ceiling.
Bars are 95% bootstrap CI over source games (n = 40). Read the segments and the spread across rows, never the level: legality is a deterministic function of a board that already decodes at 0.98, so a space that loses board and legality equally is merely lossy.



R1 placement — a move puts one disc of the mover's color on an empty square.
R2 bracketing — the disc must close a gapless line of opponent discs with one of the mover's own.
R3 turn — colors alternate; legality is judged for the mover, not the opponent.
